

INTERCONNECTION SOLUTIONS

Equinix's carrier neutral sites are the most densely interconnected data centers in North America. Our customers have provisioned more than three times more cross connects per cabinet than other national network neutral providers.

ALL WITHIN YOUR REACH

In today's interconnected world, companies continuously look for more opportunities to do business. Grow market share. Maximize ROI. They want resilient and redundant access to efficiently connect with customers, employees and suppliers. Equinix provides the largest neutral marketplace with more choices of networks and more competitive pricing in more locations.

Best of all, our experienced and knowledgeable team works closely with you, providing the ongoing support you need to stay ahead of the competition. Service provider and enterprise clients rely on Equinix for direct access to the most diverse selection of network providers in the industry, which fosters a dynamic marketplace to expand their businesses.

HELPING YOU STAY AHEAD

Equinix delivers comprehensive colocation, interconnection and peering solutions in a neutral marketplace built for your business. Additionally, our bundled solutions combine rack space, power, and other products at one price for easy ordering. We give clients access to more markets than any other service provider, and more networks for bandwidth abundance and network redundancy.

Let us bring you the products and services, stability, security, and know-how you require to be successful in today's challenging business environment.

| Interconnection Features | Client Benefits |
|--|---|
| Access to a Multitude of Companies: Internet service providers, carriers, enterprises, content delivery networks, application service providers, managed service providers | Facilitates peering in the PAIX® environment Provides redundancy/diversity options Provides revenue-generating opportunities |
| Wide Range of Interconnection Options | Capability of one-to-one or one-to-many connections, Enhances network performance and reliability, Reduces transit costs, Reduces operating costs: local loop savings; multiple connections can be configured on a single router card; scalable port speeds |
| State-of-the-Art Managed Infrastructure | Interconnections accomplished quickly—within days, Pre-provisioned racks and power, Customizable space and power, 24x7 security/technical support |
| Neutrality | Provides choice and flexibility Drives competitive pricing |

INTERCONNECTION SOLUTIONS

From direct interconnection solutions and Metro Cross Connects, to our SingleCNXT-i service that allows you to access to multiple providers with the convenience of a single interface, Equinix will implement the solution that best meets your needs.

MORE CHOICES, MORE EFFICIENCY

Whether you have applications or services to deliver, content to distribute, or new markets to conquer, Equinix’s neutral interconnection services provide you with more networks, more partners, and more customers to choose from, for lower overall costs. Outsourcing network-dependent components of your IT infrastructure to our secure, state-of-the-art colocation and interconnection facilities enables you to cost-effectively access multiple bandwidth providers – a strategy that reduces your reliance on costly local loops (the most common point of failure), enhances network reliability and redundancy, and boosts network performance.

Equinix offers a wide variety of interconnection types – including both Layer 1 and Layer 2 – from direct interconnects, to SingleCNXT®-i, to our industry-leading PAIX® services that allow you to publicly peer through Internet exchange points in 12 markets.

| Interconnection Layer 1 | Interconnection Layer 2 |
|--|--|
| Cross Connects: DS0, DS1, DS3, Fiber, Ethernet | PAIX® GNIs, PAIX VNIs, PAIX SNIs |
| Patch Panels: DS-X, Fiber, Ethernet | Gigabit Network Interconnection (GNIs) – 100 Mbps, Fractional GigE (333 Mbps), Half GigE (500 Mbps), GigE, NxGigE, and fractional and full 10 GigE |
| Conduit and Innerduct | Virtual Network Interconnection (VNIs) |

Every Equinix colocation facility is designed with a Meet Me Room (MMR). Customers who wish to connect to other customers within the facility do so by passing through the cross connect panels in the MMR. A cross connect enables customers to interconnect data equipment within their colocation space to the Equinix transport area, where customer-to-customer and customer-to-carrier interconnectivity occurs with minimal provisioning time.
